# Why should you learn AI?

- Automation of jobs is happening at an exponential rate.
- Lucrative Career.
- Core component for Fourth Industrial Revolution.
- Huge social impact potential.

## Where most jobs have been lost

Cumulative job losses attributed to automation since 2000

# Why are computers not intelligent by default?

- A computer can be loosely thought of as a glorified calculator.
- The Specification Problem. A computer can only understand and execute steps that are specified formally.
- Most tasks that we humans perform with ease is hard to formalize.
- Control the entire operation of a nuclear power plant: Easy
- Fold Clothes: Very Hard ([Video](#))

*"Intelligence measures an agent's ability to achieve goals in a wide range of environments."*

- Legg and Hutter 2007

# Abilities needed to Manifest Machine Intelligence

Ability to,

- acquire data about the environment.
- extract knowledge from the acquired data.
- transform the knowledge into a goal-relevant representation.
- take actions that achieve the goal.

# Abilities needed to Manifest Machine Intelligence

Ability to,

- acquire data about the environment. Data Mining, wrangling, etc.
- extract knowledge from the acquired data. Machine Learning
- transform knowledge into a goal-relevant representation. Deep Learning
- take actions that achieve the goal. Reinforcement Learning
